SUMMARY

I am a full-stack web developer who builds real-world web applications to solve practical problems. I work on both frontend and backend and focus on writing clean, simple, and maintainable code. I enjoy understanding user needs and turning them into reliable, working solutions from start to finish.

WORK EXPERIENCE

Support Engineer, at [Learn With Sumit](#)

Jan 2025 - Dec 2025

- Served as a Support Instructor for the Reactive Accelerator course, assisting students and resolving technical issues.
 - Maintained and updated the course website to ensure smooth performance.
 - Reviewed student assignments and provided feedback to improve code quality.
-

PROJECTS

MessMama - Digital Management App - [Link](#)

- Implemented core modules including expense tracking, payments, subscriptions, and authorization guards.
- Defined feature workflows and user flows to ensure a smooth and scalable system design.
- Designed and implemented the core business logic driving the project's functionality.

Azizul Law Academy - LMS System - [Link](#)

- Implemented multi-language support to ensure accessibility for a diverse user base.
- Developed and integrated the course purchase payment system for secure and seamless transactions.
- Made key architectural decisions to ensure scalability and maintainability of the project.

TapaScript - Blog Site - [Link](#)

- MDX Support: Write articles in Markdown with embedded JSX for interactive content.
- Code Block Support: Syntax-highlighted code snippets for improved readability.

CodeVionix - Agency Site - [Link](#)

- Developed and integrated the backend system using Payload CMS for structured content and data management.
 - Designed and implemented a centralized authentication system enabling users to log in across multiple websites using the same credentials with a shared database.
-

COURSE

Mastery of Frontend Engineering

[Learn with Sumit](#)

Completed comprehensive training on React, Next.js, and real-world project architecture.

2024
